

nTrack Nursing Procedure Log

Stay on track with nTrack

nTrack is a comprehensive solution that tracks, evaluates and reports on the student's clinical experiences and skills throughout their training program. This innovative tool saves time, reduces administrative burdens and increases productive interaction and feedback for both students and faculty.

With nTrack, students capture, via a mobile device such as an iPhone or desktop computer, complete information about each patient encounter right at the point of care. Information captured is HIPAA compliant and secure. Periodically, students sync their devices to upload their clinical experience information to a secure online web-based repository. The information stored on the secure server remains accessible via password-protected log-in for additional student edits and faculty review and evaluation.

nTrack is fully integrated with Skyscape's over 500 trusted clinical information resources a value proposition unavailable with any other tracking software. Students can use Skyscape's patented SmartLink technology to link from nTrack to clinical, drug, lab and other information as they are working with patients. This unique combination of clinical resources and experience tracking ensures that students will deliver the highest quality of care and achieve the most learning with each patient encounter.
